Distributed By:

Orange arrow indicates travel of the deck, 26" up and down, when parts are added or removed. Starting height of 32" to 36" depending on part requirements.

- A self contained, *spring actuated* device that is custom built for size, and weight to fit most material handling needs.
- Deck *automatically lowers* as parts are added and *rises* as parts are removed.
- Materials (parts) kept at the correct ergonomic window of working height.
- With *new "J" hook spring bracket design* adding or removing springs in seconds easily adjusts weight capacities.
- Deck starting height may vary due to parts requirements. Average start height 32" to 36".
- Vertical travel of 26".
- Increase productivity while reducing potential injury from bending and twisting for associates.
- Ergonomic devices that can be pre-loaded and easily delivered to associates work area, which enhances J.I.T. ergonomically.
- A mobile self-contained unit for inter-plant transfer between departments for total shared ergonomic benefits.

Shown with front cover

Three-Side Parts Enclosure. Spring assisted deck lowers and rises as weight is added or removed. All sides lower and rise together for total parts protection. (Shown with front cover removed).

Tilt-Up Shelves Option. Spring assisted deck lowers and rises as weight is added or removed. All shelves lower and rise together for the maximum individual parts protection, or image dunnage trays.

- An ergonomic device that has three walls attached to the **self-leveling deck**, when parts are added and deck is completely down (with front cover) the device becomes a parts container within a container.
- A self contained, **spring actuated** device that is custom built for size, and weight to fit most material handling needs.
- Deck automatically lowers as parts are added and rises as parts are removed.
- Materials (parts) kept at the correct ergonomic window of work height.
- Vertical travel of 26".
- Deck starting height may vary due to parts requirements. Average start height 32" to 36".
- With **new "J" hook spring bracket design**, adding or removing springs in seconds easily adjusts weight capacities.
- Increase productivity while reducing potential injury from bending and twisting for associates.
- A mobile self-contained unit for inter-plant transfer between departments for total shared ergonomic benefits.
